PROJECT QUALITY EVALUATION REPORT

ASSESSOR GUIDE

Project title [5-10 words]	The launch of GreenThumb, a Gardening Companion App
Performance against quality requirements [40-60 words]	Based on the information provided, students must evaluate whether the 2 quality requirements set in the Project Quality Management Plan were met. For example: 1 requirement was consistent user experience with a smooth and intuitive user interface across all devices. This wasn't met as the app works well on Android phone only. Another requirement was to ensure that user data is securely stored and transmitted, but this hasn't been tested yet.
Performance against project deliverables / Shortfalls in quality outcomes [50-80 words]	Based on the information provided, students must evaluate whether the project's deliverables set in the Project Quality Management Plan were met. Students must identify 2 shortfalls in quality outcomes. For example: 1] A project deliverable was to have a finalised and implemented UI/UX design that is consistent across all platforms [iOS, Android, tablets], but testing hasn't been fully finished and the app works the best on Android. Quality shortfall: Insufficient testing and inability to rectify issues promptly. 2] The implementation of data security measures in the app wasn't tested yet due to other priorities. Quality shortfall: Due to time management issues no testing was done on data security.

Recommendations for improvements

[20-50 words]

Students must make post-launch recommendations for each shortfall identified.
For example:
- Work out a plan for required testing and schedule prompt rectification work.
- Schedule data security testing as soon as possible.
